

FGC Health Announces Pharmacy Services Platform for Independent Pharmacy Owners

(Winnipeg, Manitoba, Canada) FGC Health is proud to announce a new pharmacy services platform for independent pharmacy owners in Canada and North America.

“The launch of our platform is very exciting,” says Dalbir Bains, Chairman, President and CEO of FGC Health. “Our world-class executive team, combined with our experience and proven track records are here to help meet the needs of independent pharmacy owners who are looking for strategic partners. With independent pharmacy owners, our mission is to serve all the stakeholders in the industry – patients, healthcare professionals, regulatory agencies, and insurance providers. “

“Investing in the human approach to healthcare”

Founded in 2019 by Dalbir Bains, FGC Health’s executive team has a proven track record of acquiring over 100 pharmacies in Canada and has developed “best in class” technology and processes in human resources, procurement, distribution, technology, finance and accounting, pharmacy operations, sales and marketing. FGC Pharmacy is a division of FGC Health.

A team of senior experts in the Canadian pharmacy industry leads FGC Health, including Dalbir Bains, President and CEO; Paul Thomson, Vice President Pharmacy Operations and Business Development; and Tom Van Natter, Vice President Acquisitions and Partnerships.

“Together we have over 60 years of combined experience acquiring and operating pharmacies. We know the people and we know the culture,” says Tom Van Natter. “We have invested over \$100 million dollars in the independent pharmacy sector already, and we are proud to say we have provided a compounded annual rate of return of over 40% per year over our investment horizon.”

FGC Health knows that serving the community in which pharmacies operate is paramount to their success. Whether a pharmacist is selling 100% of their business or choosing to partner with FGC, or perhaps even purchasing a store with our support, FGC Health ensures clinical excellence in patient care by providing critical resources for each location, such as technology, human resources, procurement, wholesale and distribution, financing and legal support.

Dalbir Bains states, “We invest in the human approach to health care as we recognize everyone’s health journey involves creating space, meaning they want to feel better, from acute or chronic conditions, so they can do the things they love. This behavioral and human approach to healthcare is something we want to invest in and make pharmacy a little different.”
